To check your risk at oralcheck.org

MAIN RISK FACTORS

Tobacco use (any form)

Heavy alcohol use

Prolonged sun exposure (lips)

HPV infection

Family history of oral cancer

Infrequent dental visits

WARNING SIGNS

- Red or white patches in the mouth
- A sore that doesn't heal in 2 weeks
- A lump or thickening in the cheek
- Unexplained numbness or pain
- Difficulty chewing or swallowing
- Persistent hoarseness

The 2-week rule

Any sore, patch, lump, or change in your mouth that hasn't gone away after 2 weeks deserves a look from a dentist or doctor. Most of the time it's nothing — but catching oral cancer early changes everything.
